

Dear Parents & Guardians,

We are pleased to announce that this year we will be using *Simple Solutions Common Core Math* as a supplement to our math curriculum.

The *Simple Solutions Approach* is a strategy that combines solid instructions with distributed practice and meaningful assessment. The strategy is based on the belief that students will retain what they have learned when they are required to revisit concepts and practice skills on a daily basis.

We will go over the *Simple Solutions* lessons and work on new material outlined by Common Core. You can help your child by supporting him or her to complete a *Simple Solutions* lesson each day the book comes home. Please refer your student to the **Help Pages** in the back of the book if there are any items that seem unfamiliar or if your child needs more information.

We look forward to exceptional growth in your child's learning and retention of material outlined in the Common Core State Standards.

Sincerely,

Ms. B
